Italian Textile Machinery: Orders Still Declining In 2024 Second Quarter

MILAN - In the second quarter of 2024, the order index for Italian textile machinery, as reported by the Economics Department of – the Association of Italian Textile Machinery Manufacturers, showed a decline compared to the period 2023 April-June (-17 percent). In value terms, the index stood at 49.8 points (base 2021=100).

This result is completely due to the decrease recorded in foreign markets (-22 percent), where orders represent 86 percent of the total. Conversely, in Italy, there was a 25 percent recovery compared to the second quarter of 2023. The absolute value of the index in foreign markets was 48.8 points, while in Italy it was 57.3 points. In the second quarter, the order backlog reached 4.3 months of assured production. Additionally, ACIMIT's survey shows that in the first six months of 2024 the utilization rate of production capacity by Italian manufacturers was 61 percent. This percentage is expected to rise to 64 percent in the second half of the year.

Marco Salvadè, president of ACIMIT, stated: "The order index for the second quarter shows a clear slowdown abroad compared to last year. This decline highlights the high uncertainty due to the difficult geopolitical situation". The confirmation of what is indicated by the ACIMIT index also comes from Italian export figures, updated to the first quarter of 2024. Excluding China and Egypt, the main foreign markets show a general decline in demand for textile machinery, not just Italian one.
