

Italian Textile Machinery Industry prepares for Green Transition challenges

The General Assembly of ACIMIT, the Italian Textile Machinery Manufacturers Association, held in Milan on July 9, emphasized the industry's commitment to innovation amidst current global uncertainties.

Marco Salvadè, ACIMIT's president, highlighted key data from the Italian textile machinery sector: in 2023, production and exports both declined by 16%, reaching values of 2.3 billion euros and 2 billion euros respectively.

China, Turkey, India, and the United States remain the main destinations for Italian textile machinery manufacturers. In 2023, demand for machinery in these markets was weak, but some positive signals emerged in the first quarter of the current year, especially from the Chinese market and again from Egypt, Pakistan, Brazil, and Japan. "2024 will still be a year characterized by many uncertainties. Mainly due to the uncertainty of the geopolitical situation and fluctuations in final demand" said Salvade.

In an especially difficult international scenario and with a still sluggish market, the Italian textile machinery sector remains a leader alongside a few other Countries, such as China, Germany, and Japan. "Our sector is renowned worldwide for its reliability, know-how, and the uniquely Italian ability to combine tradition and innovation," noted the ACIMIT president. Accelerating innovation remains crucial, particularly to meet the challenges that await Italian manufacturers in supporting textile companies on their sustainable transition journey.

To highlight the opportunities that the European green transition opens up for technology suppliers, the public section of the ACIMIT General Assembly addressed a very current issue: textile recycling. The EU's legislative guidelines aim to accelerate the green and circular transition of the textile sector with various actions: from eco-design to EPR, from waste export regulation to green claims.

Meanwhile, there is a growing demand for recycled textile fibers driven by the sustainable policies of brands that should not be underestimated.

Thus, technologies play an important role in providing solutions to companies engaged in the new circularity supply chain: from sorting and selection of garments to preparation phases and recycling processes.

During the event, several speakers agreed that the experience and capabilities of the Italian textile and textile machinery sector should be fully leveraged at this crucial stage for the entire supply chain.

As President Salvade noted, "Textile machinery companies intend to increase R&D activities in this area, collaborating with their textile customers in the belief that the circular transformation of business models also represents an opportunity for technology suppliers to increase their competitiveness."

ACIMIT - Association of Italian Textile Machinery Manufacturers, represents an industrial sector that comprises roughly 300 manufacturers, which produce machinery for an overall worth of around 2.3 billion euro, of which 86% are exported. Creativity, sustainable technology, reliability and quality are the hallmarks that have made Italian textile machinery worldwide leaders.
