## BUSI® Rimaglio 360°

Dear International Partners and Friends,

Among our range of models, **BUSI® MEDICAL** stands out as the ideal machine for producing graduated compression socks and sleeves.

This innovative machine combines fully automatic, **stitch-by-stitch** toe-closing with the capability to knit true rib structures and intricate **patterns in up to five colors**.

Driven by our commitment to continuous innovation, we've enhanced the stitch-by-stitch toe-closing device to enable **seamless sewing of open tubes**.

This advancement eliminates the need for time-consuming manual work when finalizing open-ended sleeves, significantly streamlining production and boosting efficiency.

**The distinctive sleeve structure seen in this image is achievable exclusively through the combination of BUSI® MEDICAL and BUSI® RIMAGLIO.**

Our machines are designed to enable the production of a wide variety of socks and sleeves.

To explore the full potential of BUSI® machines, please don't hesitate to contact us.

Warm regards,

**Leonardo Busi**

TECHNICAL DIRECTOR
